Experience

Confidential Company January 2026 – Present
Mobile Developer

OZZY Academy August 2025 – December 2025
Chief Technology Officer (CTO)

- Led the full technology strategy for Ozzy Academy, including mobile app development, backend systems, automations, and IT infrastructure.
- Designed and built the **Ozzy Academy mobile app** (Flutter), including transport tracking, student management, dashboards, and real-time location features.
- Developed and maintained the **cloud architecture** using Firestore, Google Cloud, Cloudinary, and real-time APIs.

AtlasAi Remote
Mobile Developer December 2023 – June 2024
At AtlasAI, I contributed to the development of two mobile applications: REPaiR, an AI-powered tool that assists users in repairing broken items, and StoryWonder, a creative app that generates personalized bedtime stories featuring child characters.

Google Play Store 2022 – Present
Freelancer
I have experience in developing cross-platform apps for Android and iOS using Flutter, and uploading these apps to the Google Play Store after completing thorough testing as required by Google.

Projects

Storywonder App
This app allows parents to create personalized stories for their children. Parents can create a child profile with specific characteristics such as name, age, eye color, hair color, and more. The app also enables parents to provide a description of the story they want. Using GPT-4 and Stable Diffusion, the app generates a detailed, customized story based on the input provided.

REPaiR
This app allows users to repair broken items in an easy and efficient way. Users can take a picture of the item they need to repair (e.g., a broken chair), and the app provides a step-by-step guide to fix it, along with a list of the specific tools required for the repair.

Wallpaperify
I developed this app to search for wallpapers and download them locally using the Pexels API.

Accuweather App
I built this app using Flutter and the Open-Meteo API. The app allows users to search for a city and get current, daily, and weekly weather information, all presented with a friendly and intuitive user interface.

Diary App
A daily diary app that lets you log your feelings and thoughts for each day, along with the date and a personal description.

Hangout
This app allows you to create, edit, and delete contacts. You can also send messages, make phone calls, and switch the app's language between English and Spanish.

Protein App
This app allows users to search for users to explore scientific models like H2O and Carbon, and view them in 3D. You can log in using Google Firebase, with additional security features including fingerprint and Face ID authentication.

Swifty Companion
This app allows users to authenticate with the 42 Intra API and search for 42 network users. It provides detailed profiles, showing information about the user, the projects they've validated, failed, or are in progress with, as well as the skills they've completed.

LEET Event
LEET Event lets 1337 students and staff discover and join events like workshops, talks, and coding nights. It features 42 Intra authentication, RSVP with calendar integration, and automatic reminders before events. Users can check in quickly using a QR code and submit post-event feedback. Organizers can create and manage events through a dedicated admin dashboard.

Ozzy Shuttle
Built a real-time transport tracking app using Flutter & Firestore, with live driver location, student pickup status, and optimized routes.

Education

42 Paris IT Architect
Paris 2026
RNCP 7 – Network Information Systems Architecture.

1337 coding school Software Engineer
Khouribga Aout 2021 - present
During my time at 1337 Coding School, I have significantly developed my skills and gained knowledge in various areas, including networking, low-level programming (C and C++), Docker, web development, mobile development, and algorithms.

ISGI Specialized Technician in Computer Development
Khouribga 2019 – 2021
Completed a 2-year program in Computer Development, focusing on languages and technologies such as C, HTML, CSS, JavaScript, jQuery, and .NET.

Ibn Tofail Bachelor's Degree
Oued Zem 2018

Volunteering

MNPC Moroccan National Programming Contest 2022
Khouribga

AMESC - Africa Middle East Space Conference 2025 2025
UM6P - Rabat
